EXPLORING SPRING FRAMEWORK WITH JAVA - SECTION 1 – REVIEW

1: Tight Coupling	8: @Bean	9: Auto-wiring
2: Loose Coupling	7: @Configuration	10: Java Bean vs Spring Bean
3: Java Interfaces	6: Basic Annotations	
4: Spring Container	5: Application Context	
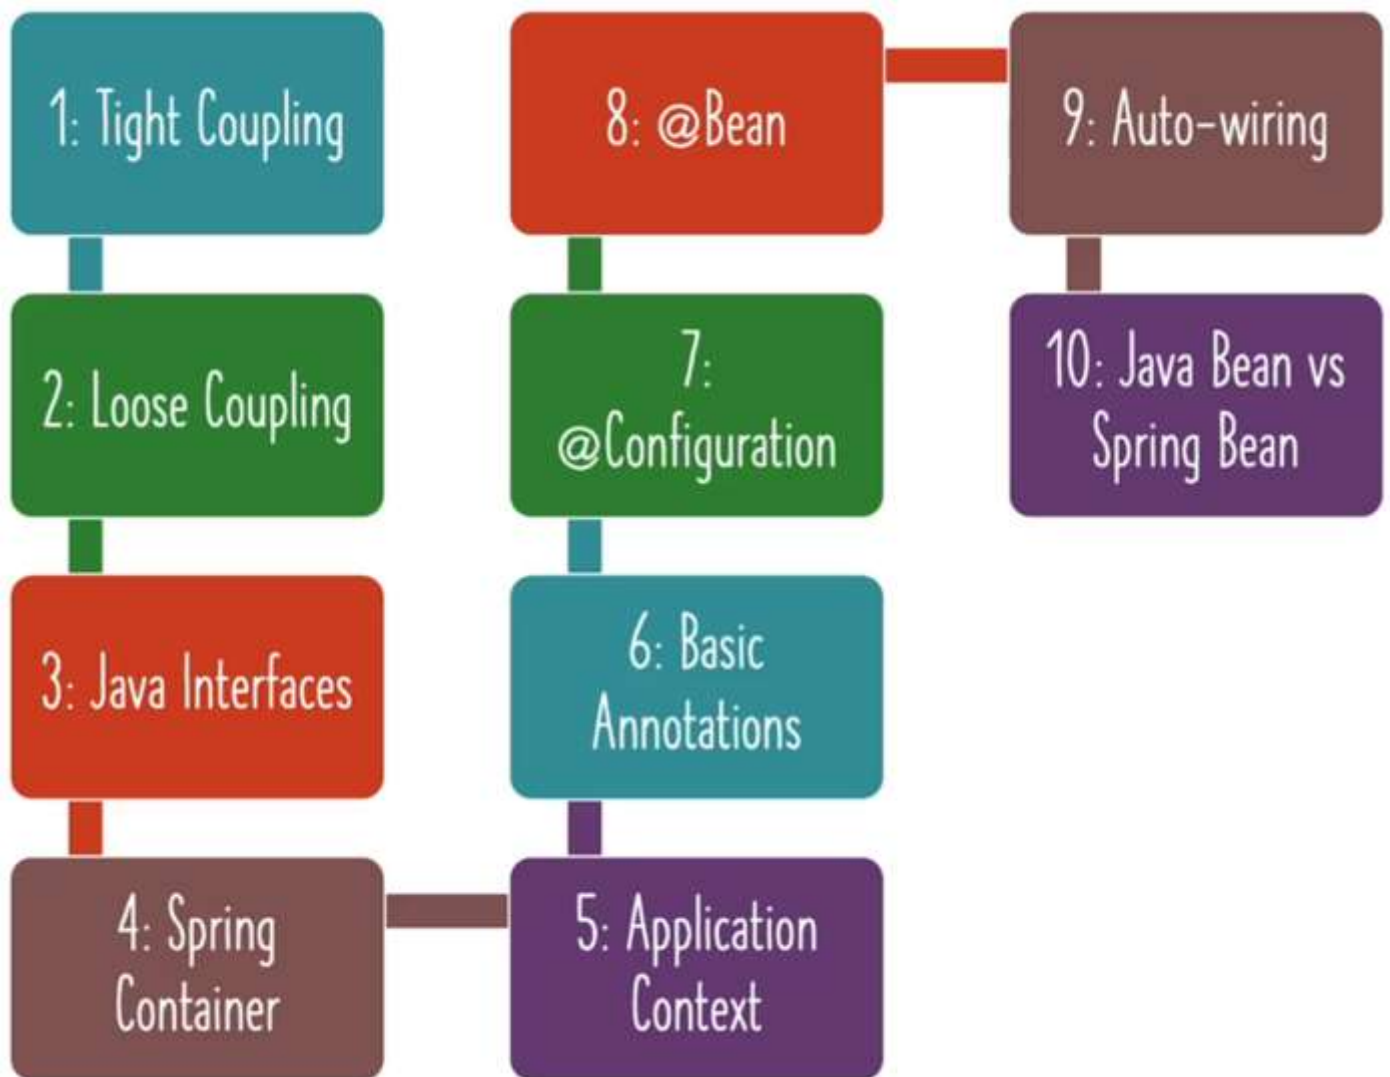

These are the concepts we have learnt now. Still haven't answer some questions.

1. **Spring is managing objects and performing auto-wiring.**
   a. But aren't we writing the code to create objects?
   b. How do we get Spring to create objects for us?
2. **Is Spring really making things easy?**
